

Amendments to the Claims:

Claims 1 and 7 have been amended herein. Please note that all claims currently pending and under consideration in the referenced application are shown below. Please enter these claims as amended. This listing of claims will replace all prior versions and listings of claims in the application.

Listing of Claims:

1. (Currently Amended) A method for assaying a chemical comprising:
providing an extraction solution for dissolving a chemical of a ~~solid, organic-~~ crop sample and a predetermined amount of an internal standard in a container;
collecting a ~~solid, organic-~~ crop sample at a crop storage location;
placing the ~~solid, organic-~~ crop sample in the container;
transporting the container including the crop sample from the crop storage location to a chemical testing facility;
quantitatively measuring an amount of the chemical in the extraction solution at the chemical testing facility; and
comparing the amount of internal standard present in the container at the chemical testing facility with the amount of internal standard placed in the container at the crop storage location to obtain a calibration ratio.
2. (Cancelled).
3. (Previously Presented) The method according to claim 1, wherein providing the extraction solution and the predetermined amount of an internal standard comprises sending a kit having the container including the extraction solution and the predetermined amount of the internal standard to the crop storage location.
4. (Previously Presented) The method according to claim 1, wherein quantitatively measuring the amount of the chemical in the extraction solution comprises placing a portion of

the extraction solution in a gas chromatograph.

5. (Original) The method according to claim 1, further comprising instructing a user on how to collect the sample.

6. (Original) The method according to claim 1, further comprising recording information about the sample.

7. (Currently Amended) The method according to claim 1, wherein the ~~solid~~, ~~organic-crop~~ sample is a tuber.

8. (Previously Presented) The method according to claim 1, wherein the chemical is a pesticide, a disinfectant, a sprout inhibitor, or a sprout suppressant.

9. (Previously Presented) The method according to claim 1, wherein the chemical is a substituted naphthalene or chlorpropham.

10. (Previously Presented) The method according to claim 1, further comprising: calculating a ratio of a measured amount of the internal standard in relation to the predetermined amount of the internal standard; and calibrating the amount of the measured chemical based on the calculated ratio.

11. (Previously Presented) The method according to claim 3, further comprising: placing the container including the sample in the kit; and wherein transporting the container including the sample comprises transporting the kit having the sample in the container to the chemical testing facility.

12. (Previously Presented) A method for analyzing a sprout inhibitor on a tuber comprising: collecting a tuber sample from the tuber at a potato storage facility;

depositing the tuber sample into a container including an extraction solution;
transporting the container including the tuber sample to a chemical testing facility;
assaying the sprout inhibitor in the extraction solution at the chemical testing facility;
placing a predetermined amount of an internal standard in the extraction solution;
quantifying an amount of the internal standard in the extraction solution; and
comparing the quantified amount of the internal standard in the extraction solution in the container at the chemical testing facility with the predetermined amount of the internal standard placed in the extraction solution deposited in the container at the potato storage facility.

13. (Original) The method according to claim 12, wherein collecting the tuber sample comprises cutting the tuber sample from the tuber.

14. (Cancelled)

15. (Previously Presented) The method according to claim 12, wherein transporting the container comprises sending a kit including the container, the tuber sample, and the extraction solution to the potato storage facility.

16. (Original) The method according to claim 12, wherein assaying the sprout inhibitor comprises placing a portion of the extraction solution in a high pressure liquid chromatograph or a gas chromatograph.

17. (Original) The method according to claim 12, wherein assaying the sprout inhibitor in the extraction solution comprises quantitatively measuring an amount of the sprout inhibitor.

18. (Original) The method according to claim 12, further comprising instructing a user how to collect the tuber sample.

19. (Original) The method according to claim 12, further comprising recording information about the tuber sample.

20. (Previously Presented) The method according to claim 12, further comprising washing the tuber at the potato storage facility.

21. (Previously Presented) The method according to claim 15, further comprising:
placing the container including the tuber sample in the kit; and
wherein transporting the container including the tuber sample comprises sending the kit to the
chemical testing facility.
